What is claimed is:

- A silane-containing polyvinyl alcohol or polyvinyl 1. acetal, obtainable by means of
- a) free-radical polymerization of 5 one or more esters of unbranched or branched alkylcarboxylic acids having from 1 to 18 carbon presence of silane-containing atoms in the aldehydes or hemiacetals or full acetals thereof,
- 10 b) hydrolysis of the thus obtained vinyl ester polymers, and optionally
 - c) acetalization of the partly hydrolyzed or fully hydrolyzed vinyl ester polymers.
- A silane-containing polyvinyl alcohol or polyvinyl 15 2. acetal as claimed in claim 1, wherein the silanecontaining aldehydes and the hemiacetals and full acetals thereof are selected from the consisting of compounds of the structural formulae
- I) 20 $R_3Si-[OSiR_2]_v-(CH_2)_x-CH=O$,
 - $R_3Si [OSiR_2]_v (CH_2)_x CH(OR^1)_2$, II)
 - III) $R_3Si [OSiR_2]_V (CH_2)_z Ar (CH_2)_z CH = 0$,
 - $R_3Si [OSiR_2]_v (CH_2)_z Ar (CH_2)_z CH(OR^1)_2$ IV)
 - V) $O=CH-(CH_2)_x-Si(R)_2-O-Si(R)_2-(CH_2)_x-CH=O$,
- 25 VI) $[SiO(R) - (CH_2)_z - CH = O]_{3-4}$

30

where R is the same or different and is halogen; unbranched or branched, saturated substituted unsaturated, optionally alkyl alkoxy radical having from 1 to 12 carbon atoms; is an acyl radical having from 2 to 12 carbon atoms, where R may optionally be interrupted by heteroatoms from the group consisting of N, O, S; optionally substituted aryl or an radical having 3 to 20 carbon atoms, where the

aromatic may also contain one or more heteroatoms 35 from the group consisting of N, O, S, and

is H, unbranched or branched, saturated or unsaturated, optionally substituted alkyl radical 5

35

having from 1 to 12 carbon atoms which may optionally be interrupted by heteroatoms from the group consisting of N, O, S; Ar is an aromatic group which may optionally contain one or more heteroatoms from the group consisting of N, O, S, and

x = from 2 to 40, y = from 0 to 100, z = 0 and 20.

- 3. A silane-containing polymer as claimed in claim 1 and 2, characterized in that the silane-containing aldehydes are used in an amount of from 0.0001 to 5.0% by weight, based on the total weight of the monomers.
- 15 4. A silane-containing polymer as claimed in claim 1 to 3, characterized in that ethylenically unsaturated, silane-containing monomers are copolymerized.
- 20 5. A process for preparing silane-containing polyvinyl alcohols and polyvinyl acetals by means of a) free-radical polymerization of one or more vinyl esters of unbranched or branched alkyl-carboxylic acids having from 1 to 18 carbon atoms in the presence of silane-containing aldehydes or hemiacetals or full acetals thereof,
 - b) hydrolysis of the thus obtained vinyl ester polymers, and optionally
- c) acetalization of the partly hydrolyzed or fullyhydrolyzed vinyl ester polymers.
 - 6. The process as claimed in claim 5, characterized in that the free-radical polymerization is carried out by means of bulk polymerization, suspension polymerization or by polymerization in organic solvents.
 - 7. The process as claimed in claim 5 or 6, charac-

terized in that the hydrolysis of the vinyl ester polymers is effected in alkaline or acidic media with the addition of acid or base.

- The process as claimed in claim 5 to 7, charac-5 8. terized that acetalization is effected by in reacting the partly or fully hydrolyzed vinyl polymers with aliphatic or aromatic aldehydes having preferably from 1 to 15 carbon atoms which may optionally be substituted by one 10 or more substituents from the group consisting of and sulfonate, ammonium, hvdroxyl, carboxyl aldehyde radicals.
- The process as claimed in claim 5 to 8, charac-15 9. further regulators based terized in that silane-containing compounds or on aldehydes are additionally used in the polymerization.
- The use of a silane-containing polyvinyl acetal 20 10. from claim 1 to 4 as a binder for printing inks, and in the form of films thereof for laminated safety glass and glass laminates, high-performance safety glass or glazing films.

25

30

- The use of a silane-containing polyacetal from 11. claim 1 to 4 as a protective colloid for aqueous dispersions and in polymerization in an aqueous in the preparation of medium, and dispersion powders redispersible in water.
- The use of a silane-containing polyvinyl acetal 12. from claim 1 to 4 as a binder in water-based coatings, in corrosion coatings, in powder protectants, in the ceramics industry, for ceramic 35 powders and metal powders in power injection molding and as a binder for the interior coating of cans.

5

13. The use of a silane-containing polyvinyl alcohol from claim 1 to 4 as a protective colloid in polymerization, as a binder for paper coating slips, and as a binder for building materials, ceramics and wood.
